

# TKF RECIPROCATING VERTICAL CONVEYOR

The TKF reciprocating vertical lifts are economical and efficient. The counterweighted design reduces HP and power requirements, while shaft mounted drives reduce mechanism and maintenance requirements, without a loss in HP. Counterweights effectively cut the live load in half, and are incorporated into all models. Features a 4-post design, and full top to bottom guarding, regardless of load capacity.

All Standard models have the following:

- Unit load capacities up to 6000 lbs.
- Vertical travel up to 100 ft.
- Load and unload points at any number of levels.
- Load/unload points located on any of the four sides at each level, permitting "Z", "C", or right angle flow.
- Lift speeds of 10 - 200 FPM.
- Necessary safety equipment per ASME B 20.1.

## OPTIONS

- Chain drive verse belt
- 2 Posted Cantilevered lifts available

**With over 75 years' experience, TKF guarantees you high quality, reliable conveyors from a name you can trust to meet your unique needs.**
