

TKF BOWTIE V-ROLLER CONVEYOR

The new Bowtie Conveyor from TKF is ideal for handling pipes and other cylindrical products.

TKF now offers custom Bowtie Conveyor systems that are designed to convey pipes and other cylindrically shaped products efficiently and safely within a small footprint. Sometimes called a "V" roller, the trough shape of the roller allows the product to be conveyed while virtually eliminating side-to-side movement associated with a round object.

The trough style design accomodates a wide variety of widths and lengths, and can be used indoors and adapted to outdoors or other harsh environments.

OPTIONS

- Roller to roller chain drive
- TKF roller to roller PosiGrip Belt Drive (3.75" roller center belts)
- Non contact accumulating zones available

Call Us for a Quote

Information Required for Quote:

1. Description of products including size, weight, and contact surface
